

GK-CAT-1 EKIMEN.AI

Secure AI for industry

Ekimen: automation platform powered by AI agents.
They deploy within your company, understand your operations, and
work within guardrails they cannot override.

01 WHAT IS EKIMEN

What is an Ekimen agent?

A reliable, predictable co-worker that never rests.

Ekimen is our intelligent agent platform. An Ekimen agent is available 24/7 and doesn't wait for you to ask: it reacts to events. An incoming email, a deadline approaching, a stock level dropping, or at scheduled times and intervals.

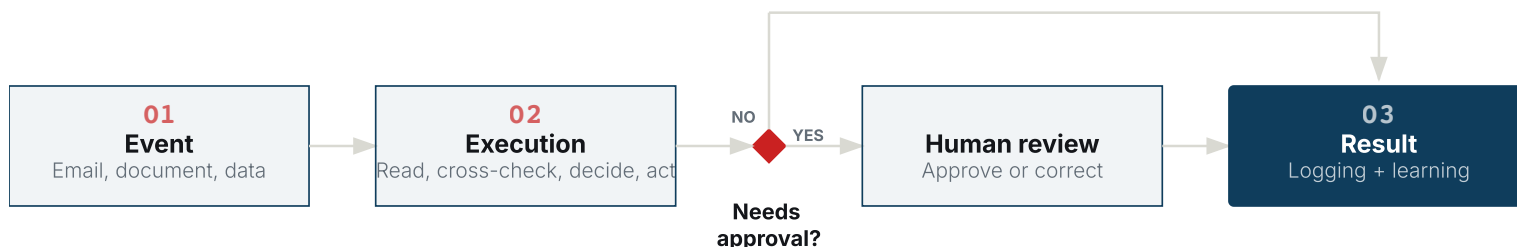

It knows where it works. It carries your company's context: how things are done, your documents and databases.

It is configured through conversation: to change its behaviour you don't need a software development project.

A four-layer architecture:

- **Context** and proprietary databases.
- **Tools** that give it access to your operations and systems.
- **Routines**, jobs with defined steps and scheduled executions.
- **Sub-agents** that can decide or analyse information dynamically.

Ekimen brings AI to production environments with security and control.

«The agent executes and requests **approval** when needed; every action is logged»

Agents we use ourselves every day

Ekimen is the system we run daily and the product we deploy for our clients. We sell what we use ourselves.

A FULL COMMERCIAL MANAGEMENT

Ekimen manages Gako AI's commercial area: quotes, invoicing, client follow-up, documentation, reporting.

B GRANT TRACKING AND MANAGEMENT

The agent collaborates in managing, tracking, and justifying grants. It becomes the process owner while you direct its work.

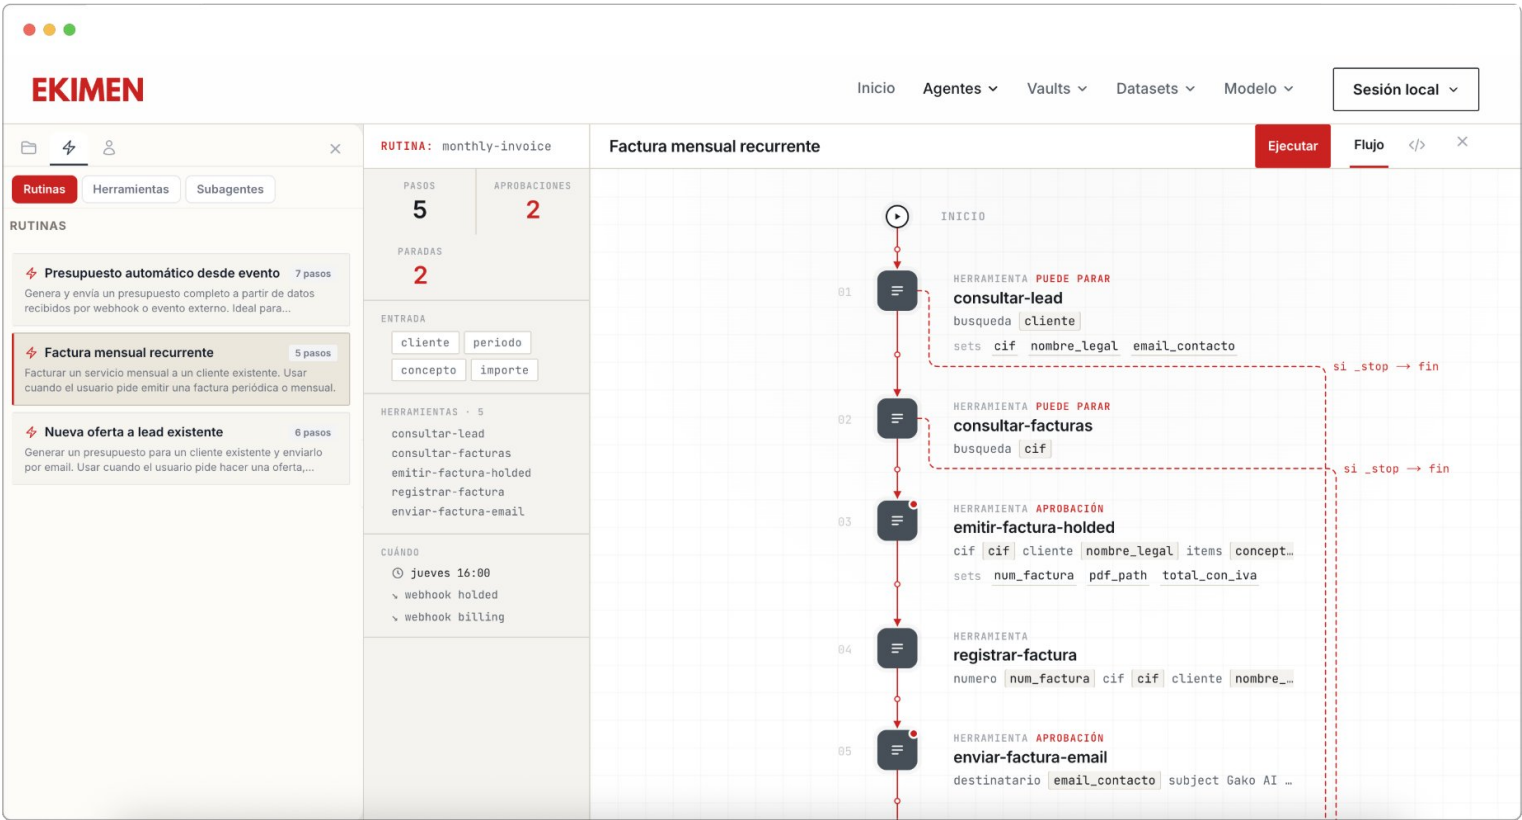

C DOCUMENT LAYOUT AGENT

This catalogue and all our commercial documentation have been generated by Ekimen agents.

D IN PRODUCTION 24/7 SINCE JANUARY 2026

The Ekimen platform has been running without interruption since January 2026, capturing, monitoring, and executing jobs unattended.

«You stay in charge: agents work alongside you, keeping every area of your business organised»

Invoicing workflow managed by an Ekimen agent

Driving Gako AI

The project relies on the very intelligent agents we commercialise, optimising our own operations.

IGOR LABURU, FOUNDER OF GAKO AI LABS

I founded Gako AI Labs to solve problems I have seen repeatedly across many companies: critical processes that depend on one person's knowledge, documentation managed by hand, and decisions made without complete information.

I hold a degree in Computer Engineering, an Executive MBA, and specialisations in artificial intelligence. For nearly two decades I led systems projects in rail, security, and motorways.

Gako AI Labs relies on specialised external collaborators and, very intensively, on its own intelligent agents. In the short time since its incorporation, the company has accumulated recognitions, certifications, and support from public and private organisations. The company operates from **ByteLab**, a technology innovation hub in Vitoria-Gasteiz.

Business project mentored by BIC Araba and the Chamber of Commerce of Álava.

RECOGNITIONS, ACCELERATION PROGRAMMES, AND GRANTS

- ✓ **Ekintzaile Programme**
SPRI / BIC Araba
- ✓ **AWS Activate, Microsoft, Google**
Startup programmes

use cases

USE CASES

Industrial applications

Each case starts from a real industrial problem. Some are already in production, others validated with real data. If your process has defined steps, data, and repetitive decisions, Ekimen can automate it.

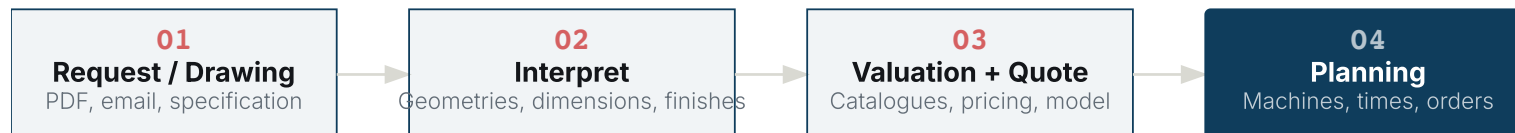

From blueprint to quote in minutes, with precision

Industrial companies spend significant time preparing quotes and interpreting technical drawings piece by piece. Valuation knowledge resides in the mind of whoever has been doing the job for decades. If that person is unavailable, the quote waits.

Indexing of supplier catalogues (PDF, Excel, DB data).
Searchable by natural language description. Automatic
cross-matching of technical specifications, quote
generation with pricing and availability.

Once the quote is accepted, the agent proposes a work sequence (machines, times, materials) and tracks progress against plan. Automatic deviation alerts.

Conversational access to invoicing data, margins per client, machine load, or product turnover. Periodic tracking reports.

05 INDUSTRIAL MONITORING

Industrial **monitoring**: regulations and competition

Ekimen's content monitoring service has been in production since January 2026.

Regulations change, competitors move, prices fluctuate.
Ekimen turns it into continuous, automatic monitoring.

A DETECTION

Continuous monitoring of public websites and URLs:
competitor catalogues, price changes on marketplaces and distributors, sector publications and trade associations, public tender portals.

B CONTEXTUAL ANALYSIS

Each detected change is contextualised against the client's business. Does it affect my sector? My suppliers? My regulations? The agent filters the noise and prioritises by real impact.

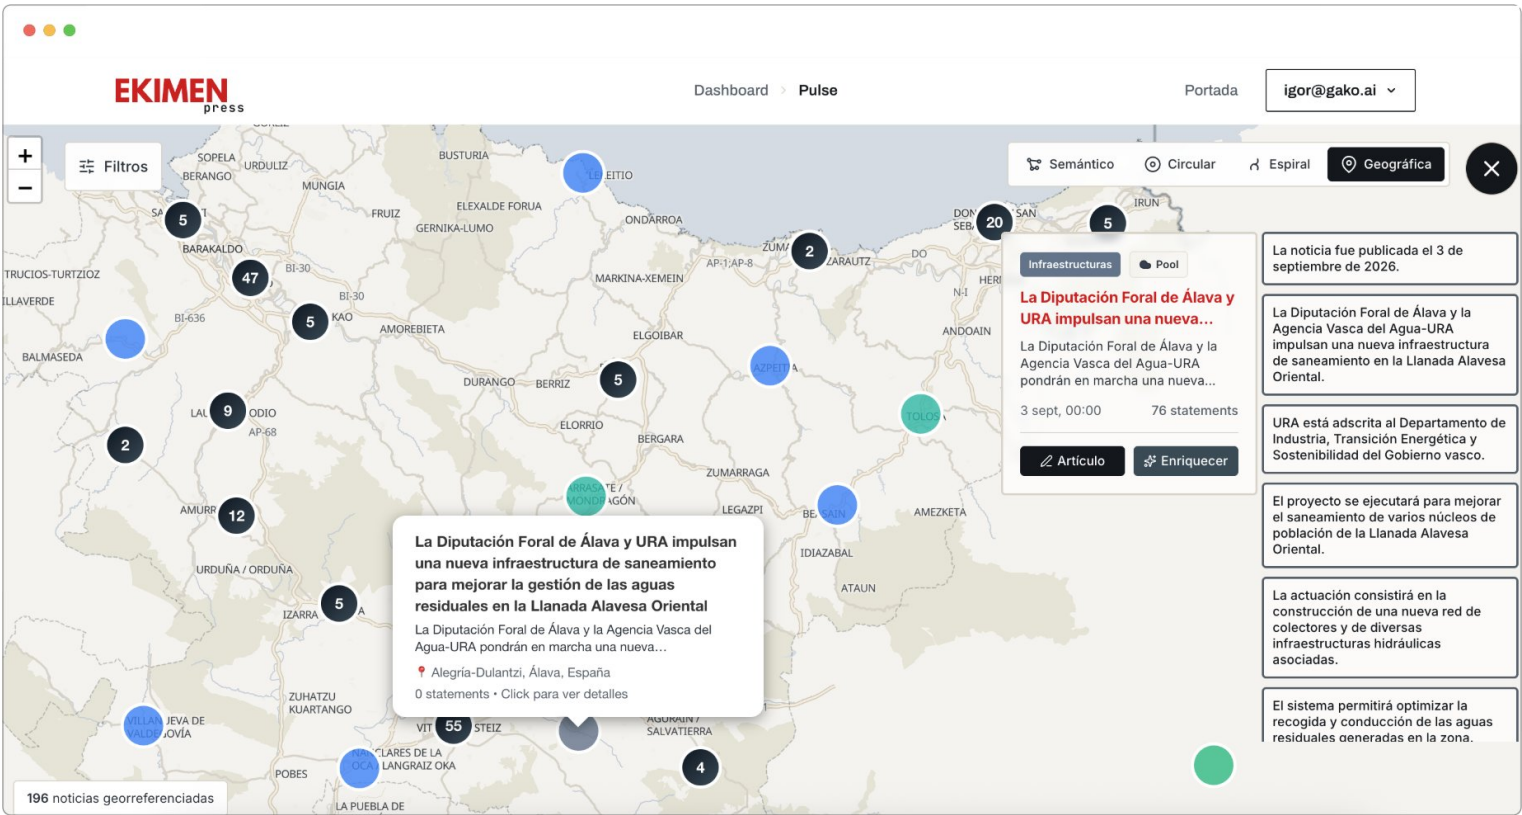

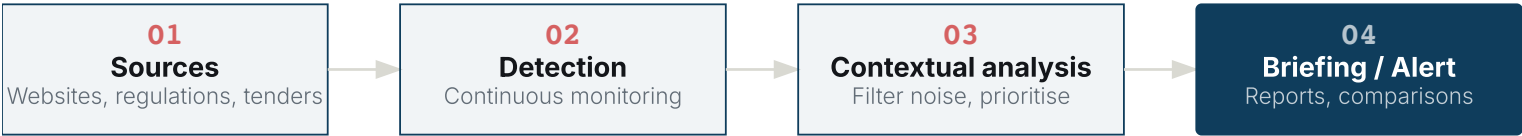

C AUTOMATIC ACTION

Competitor price changes, alerts issued before an expiry date, stock incidents.

D EKIMEN PRESS: COPILOT FOR NEWS OUTLETS

Captures information from primary sources, writes drafts, captures and publishes events, manages social media posting. An essential companion for any small newsroom. In production.

Production system for digital newspapers.

Ekimen Press: content captured and published automatically

06 QUALITY AND SPECIFICATIONS

Automating specifications and quality

Concept validated in pilot against expert judgement.

Companies working with a high volume of raw materials, suppliers, and specifications spend significant time on document management: certificates that expire, outdated datasheets, parameters out of range.

The opportunity cost is twofold: the time companies spend on document management is time not spent on product development.

A INGESTION AND NORMALISATION

The agent reads documents in any format (PDF, Excel, Word, email) and extracts key parameters: raw materials, limit values. It normalises units, formats, and magnitudes so all data is viewed under a single lens.

B LIMIT CROSS-CHECKING AND ALERTS

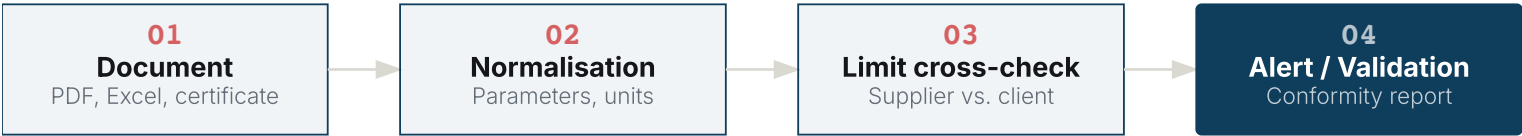

The agent cross-checks each raw material's specifications against limits, validates suppliers, and generates alerts: product out of range, expired certificate.

C CONTINUOUS UPDATES

Detects when a specification is about to expire and automatically or assistedly requests an update from the supplier. When new documentation arrives, it compares, flags changes, and waits for human validation on critical points.

D REPORTS AND ANALYSIS

Reasoned conformity reports, with parameter-by-parameter justification and reference to the source document. Revision history by supplier or product. Supplier comparisons.

CASE 3

Technical specifications dataset normalised by the agent

Gako AI Labs · Ekimen Catalogue

Edition 26-27

From diagnosis to production

A four-phase process to put an agent into production. Risk-free: if at the end of the pilot it doesn't deliver value, the project doesn't continue.

FIG. 01 · PROJECT PHASES · INDICATIVE DURATION

PHASE	DESCRIPTION	DURATION
Diagnosis	We map your processes, identify where AI delivers real return	1-2 wks
Configuration	We design and configure the agent with your real data	4-6 wks
Supervised pilot	The agent runs in production, supervised. We measure results	6 wks
AaaS	Ongoing operation as a service. Monitoring, support, and agent evolution	Monthly

FIG. 01B · TYPICAL PLAN · DURATION IN WEEKS

«An agent configured with your operations in weeks»

08 VERSATILITY

And this is just the **beginning**

The cases above are specific examples. But the platform can be configured for any process with defined steps, data, and repetitive decisions.

A INVENTORY AND STOCK

Natural language queries on inventory, complete product cards with photo, stock status, price, and supplier. Minimum-level alerts. Reports by category or supplier without exporting or cross-referencing spreadsheets.

B INVOICING AND REPORTING

Automatic invoice generation, payment tracking, periodic activity reports. Integration with electronic invoicing systems (TicketBAI).

C YOUR PROCESS

If you can describe it, we automate it. Write to us with your case and **in a 30-minute session we'll tell you if it fits** and how.

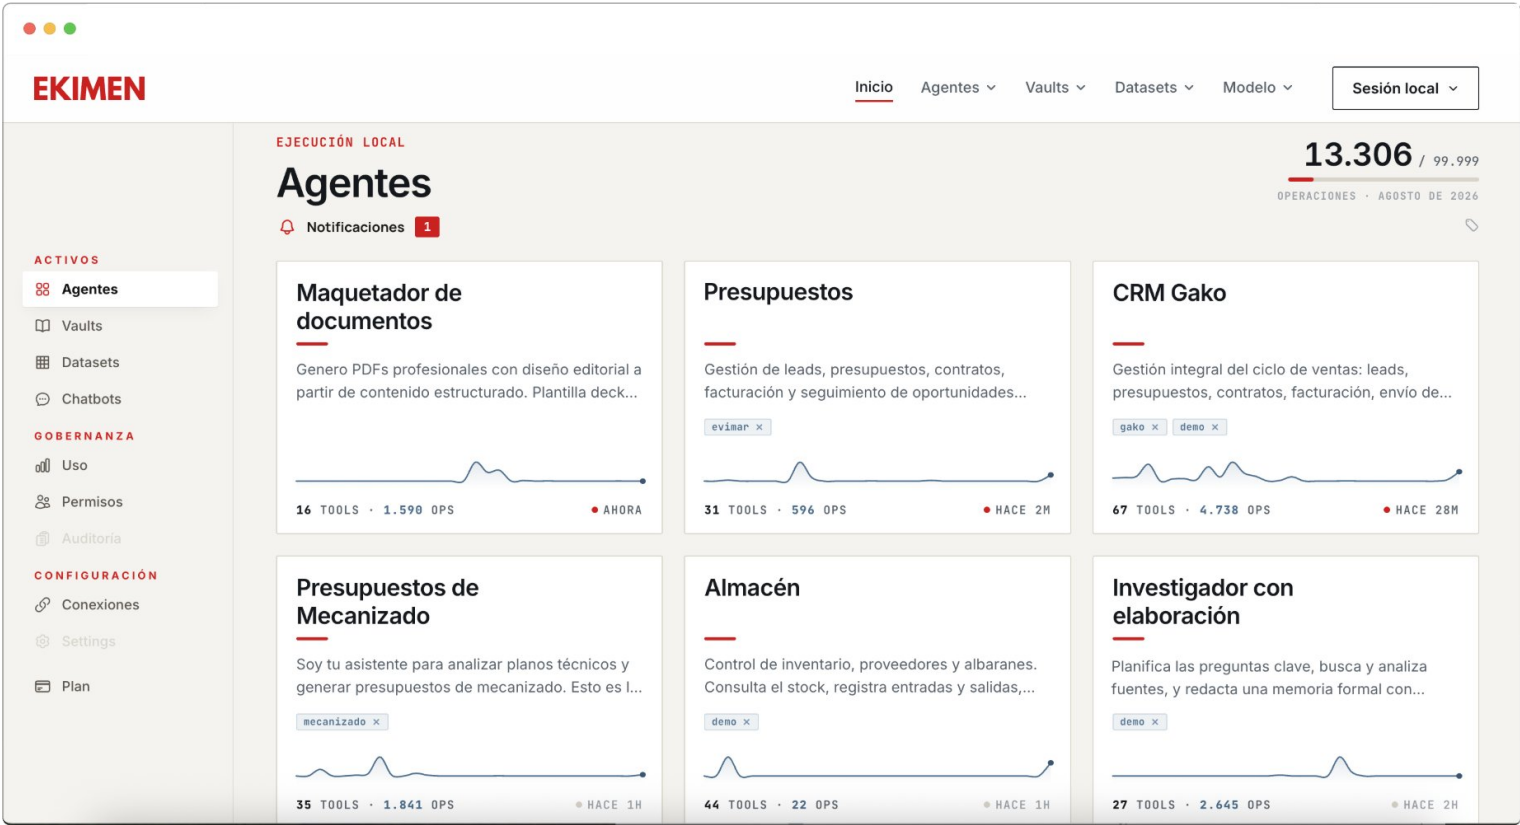

D MULTI-MODEL

Model-agnostic: Claude, GPT, Llama, Mistral. No vendor lock-in. If a model improves or drops in price, it integrates without changing the workflow. Optionally, domain-adapted models running locally.

E EKIMEN DEPLOYS ON CLOUD AND ON-PREMISE: DATA SOVEREIGNTY

Ekimen also works with local models that we train for you if needed. **Your data never leaves your company.**

«Tell us your case, we analyse it and propose an **implementation**»

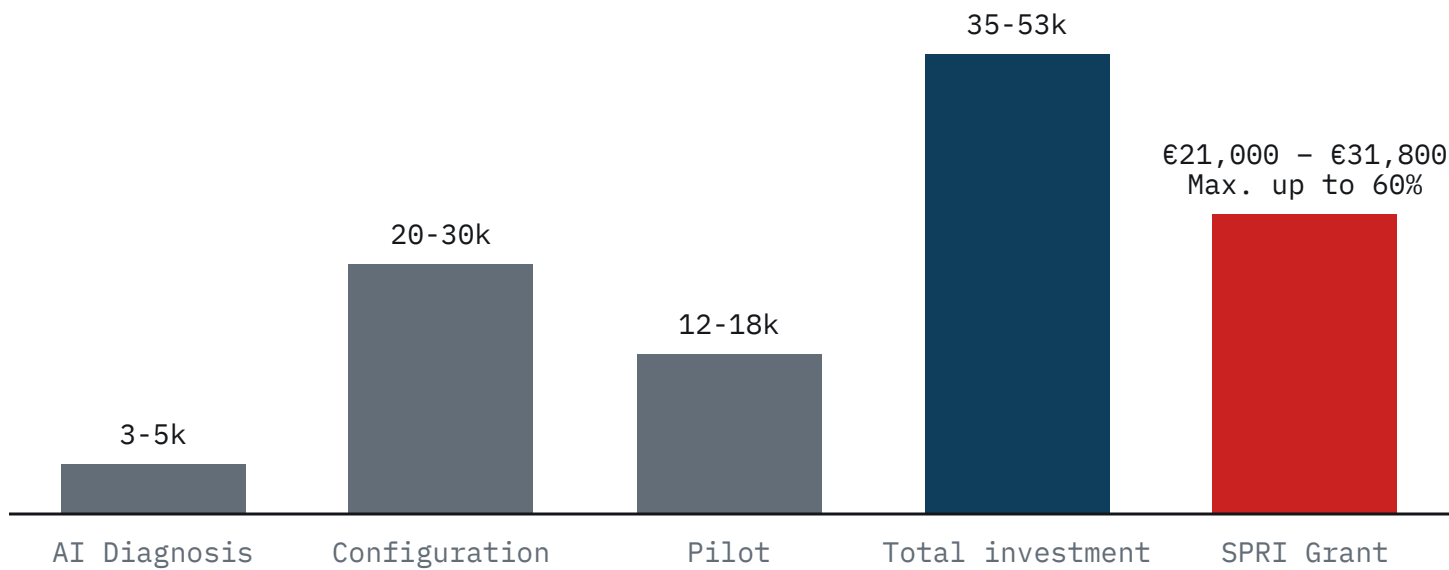

Ekimen platform control panel

09 INVESTMENT AND GRANTS

Public grants available: ask us

Example: SPRI AI Grants.

FIG. 02 • TYPICAL PROJECT • INDICATIVE INVESTMENT (THOUSANDS €)

60%

MAXIMUM GRANT • SPRI AI GRANTS • PER COMPANY

De minimis regime (€300k over three fiscal years)
Diagnosis and implementation eligible

«Other grant calls available: ask us and we'll help»

PUBLIC FUNDING UP TO 60%

- ✓ SPRI AI: diagnosis + implementation, up to €100k
- ✓ Technical report We handle all the documentation
- ✓ Regional and national Other compatible programmes under de minimis
- ✓ Other programmes More grants available, ask us and we'll help

ARTHUR C. CLARKE

Any sufficiently advanced technology is indistinguishable from **magic**

Magic is not auditable. Our Ekimen platform is.
